

## Harnessing the power of nature

We are a leading independent supplier of efficient and renewable energy systems, helping homeowners and businesses cut carbon and save money on their fuel bills.

There's never been a better time for switching to green technologies thanks to government funding providing cash-back for renewable energy. Electricity generating equipment is covered by the Feed in Tariffs (FITs) and for heating and hot water there's the Renewable Heat Incentive (RHI); both schemes are explained on the following page.

What these initiatives mean is that the cost of installing renewables will be covered in around eight to ten years; after that you'll be benefitting from free energy which in some cases can be sold back to the national grid or heat network.

Funding aside, the UK has a commitment to reduce its reliance of fossil fuels, necessary to put a stop to the continued onset of global warming.

### About the company

From single installations, to multi-application solutions, we provide a total service which covers design, supply, completed installation and subsequent maintenance. All of the renewable technologies and engineers we use are Micro-generation Scheme (MCS) approved, which means our customers can be certain of access to available grants.

We are happy to provide a free no obligation quotation. We will coordinate our services, ensuring we will match your needs with your requirements. Whether you choose to self install or use our installation service, you can be reassured that we will supply comprehensive CAD drawings and installation manuals, which will give you all the information you need. Why not contact us to discuss how we can help reduce your energy consumption and lower your energy bills.

### Our products

- Solar Photovoltaic
- Air Source Heat Pumps
- Ground Source Heat Pumps
- Solar Thermal
- Rainwater Harvesting
- Underfloor Heating
